

[AIChE-CCPS-SACChE Announces 2017 SACChE Faculty Workshop at Dow Chemical Company in Freeport, TX](#)

March 1, 2017

Dear Chemical Engineering Chairs and Faculty,

Did you know that 72% of chemical engineering graduates enter the workforce with limited process safety education?

That's why, as part of the AIChE "Doing a World of Good" campaign, and in conjunction with the Center for Chemical Process Safety (CCPS), we are inviting you to join us for an AIChE-CCPS-SACChE Faculty Workshop, June 12 – 15th at the Dow Chemical Company Freeport, TX plant site.

Process safety management (PSM) in a large industrial complex is the theme for this workshop. Attendees will learn the importance of process safety in the design and operation of a chemical plant and how it is practiced in an industrial facility. During the workshop, resources will be demonstrated for use with your course instruction. Plant tours, presentations by industrial and academic practitioners, interactive discussions and social activities will strengthen these concepts.

Attendee housing and meal expenses will be covered for the workshop (Monday thru Thursday). The ONLY cost to attendees is transportation; including flights, train tickets or driving expenses to and from the workshop. A complimentary shuttle service will be provided from the Houston Bush Intercontinental or Hobby airport to the hotel and to the workshop site, as well as a return to the airports on Thursday.

The workshop will begin Monday evening, June 12, 2017, and conclude mid-Thursday afternoon, June 15, 2017.

We hope you can join us! To register, please send an email to DowFacultyWorkshop@aiiche.org.

For information about the workshop, please contact Daniel A. Crowl, crowl@mtu.edu, or phone @ 906-370-7146 (cell).

**Please complete registration no later than May 15, 2017.
Space is limited to 25 attendees so register early!**
