ENGINEERING MANAGER CLEVELAND, OHIO

Our client, a well-established global manufacturer of innovative, high quality, metal products that are used in a wide range of applications and markets, is searching for an Engineering Manager to manage, develop and maintain product specifications, plant capital plans and plant processes. The ideal candidate has a background in metallurgy that includes powder metallurgical processing and/or rolling technology. This position will be located at the company's site in Cleveland, Ohio.

SPECIFIC RESPONSIBILITIES

- Manage all aspects of process engineering to ensure that the site produces consistent products which meet or exceed all applicable specifications
- Develop and manage an engineering culture of continuous improvement
- Represent the site as the technical representative in resolving material or process concerns with customers and suppliers
- Plan, develop, execute and complete major capital investment projects which includes concept development, detailed engineering, procurement, construction, installation, commission and start-up of new or modified production equipment and/or facilities
- Create and maintain process routes in SAP
- Investigate process technology to input into plant operations
- Supervise assigned engineers – 2 currently with a plan to add a third engineer to the group

POSITION REQUIREMENTS

- Degree in Metallurgy, Materials Science or related field
- Successful background in process engineering and product development roles within a manufacturing environment
- Understanding of the effects of processes and equipment on metallurgical results
- Working knowledge of MRP/ERP planning tools
- Background transferring technology to production
- Experienced with budgeting and planning, project management, and team leadership
- Continuous improvement mindset
- Results-orientated with entrepreneurial approach that fosters innovation
- Analytical thinker with strong decision making skills
- Capable of managing to completion a variety of projects and programs simultaneously and efficiently
- Self-motivated and responsible with mature judgment and initiative
- Team-oriented with the success of the company, organization and business as the main objective
- Excellent interpersonal and communication skills (verbal and written) with an ability to present ideas effectively

CORPORATE CULTURE

- Business Unit is an affiliate of a well-established, international producer of specialized metal products that are used in a wide range of applications and markets including high-tech industries
- The products are customer-specific semi-finished and finished components manufactured through powder processing, pressing, sintering, rolling, thermomechanical processing, and surface treatment.
- Business Unit has 500+ employees and 6 manufacturing sites (3 in United States, 2 in Europe and 1 in Asia)
- Company is owned by global private equity groups
