Meet the NCL Commissioner, David Zeichick!

“The NCL competition provides the opportunity for students to gain mastery of practical skills through well-designed challenges, covering the major aspects of computer security.”

What is the National Cyber League?

The National Cyber League (NCL), powered by Cyber Skyline, is an all virtual, learning-centered, cybersecurity competition designed to bridge the gap from curriculum to careers!

Open to U.S. high school and college students, the NCL Competition provides students with hands-on experience solving real-world cybersecurity challenges. Students virtually perform exciting tasks such as auditing vulnerable websites, identifying breaches from forensic data, and more.

The NCL mission is to enable pathways to be built for all students that will lead to successful career placement within the cyber field.

The Benefits of NCL:

Improve Skills

Our self-paced learning resources and skills assessments enable students to identify their strengths and areas for improvement.

Prepare for Future Careers

Students apply their cybersecurity knowledge to solve real-world scenarios, which prepares them to enter the cybersecurity workforce.

Earn a Scouting Report

The NCL Scouting Report provides evidence of how a student performed in the competition, making it a great resource to present to employers when applying for jobs or internships.

Have Fun!

NCL creates a fun, online environment for students to not only build their skills, but to also have fun while doing it! Plus, they can compete alongside their peers in the Team Game.

NCL is proud to partner with:
