# Attention STEM Graduate Students

**All grad students are welcome to experience
a collaborative and fun approach to learning!
Enroll now for Spring 2015 Intellectual Property Program:**

# Demystifying Copyright & Patents

**Renee Blackburn**
*Industrial Archaeology*

*"Before the program, I thought that proper citation was all that I needed to conduct sound research; however, because of the program, I now understand that there is so much more to it than that."*

*"Knowing about copyright protection is helpful for my graduate thesis writing. The program just gave me hands-on experience to understand the importance of intellectual property (IP) law. What is more, the way this class took place was interesting, and of course, effective for me."*

**Hao Wang**
*Electrical Engineering*

**Alicia Sawdon, PhD**
*Chemical Engineering* and *USPTO*

*"I quickly learned that the information and tools that we were being introduced to could help me pursue a career that was a little atypical. In particular, being able to review patent cases in this program was beneficial because I was able to use my engineering and research knowledge to understand a patent application, opening up a new career path I had not considered previously."*

## About the Program

- No credit and no cost
- Emphasizes academic publishing and patent searching
- Blended group learning experience using Canvas

- Thursday evening meetings from February 19 through April 5; 5:30pm – 7:00pm
- Dinner Served!
- Certificate of completion
- Funded by the National Science Foundation (NSF)

**Register on the Library's Workshops page:**
