NEW COURSE FOR SPRING 2017

Intro to Epidemiology, EH 4990-02 Department of Kinesiology & Integrative Physiology (KIP) MWF, 12:05-12:55 pm (3 credits) Fisher 125

Course Description/Overview

- Introduction to the principles and methods of epidemiology to understand the distribution and determinants of health in a population.
- Explore the use of epidemiologic data to address public health problems.
- Course topics include basis statistics used in epidemiologic studies, study design, sources, and impact of error.

Course Objectives:

- 1. Calculate statistics to describe distributions and determinants of diseases.
- 2. Understand and appropriately apply epidemiologic study designs.
- 3. Interpret statistics derived from epidemiologic data.
